Shares Running on Volume: MSM MALAYSIA HOLDINGS BERHAD (5202.KL)

Shares of MSM MALAYSIA HOLDINGS BERHAD (5202.KL) are moving on volatility today 1.03% or 0.04 from the open. The BM listed company saw a recent bid of 3.94 and 27100 shares have traded hands in the session.

Investors often struggle with keeping their emotions in check when approaching the stock market. New investors can have a tendency to sell off winners too quick as well as hold onto losers for way too long. Some will argue that it is never a bad thing to take profits when they are on the table, but this can leave the investor with a large amount of regret if the stock continues to surge after selling. On the other end, investors may hold onto losers for way too long hoping for a bounce back. Holding out for better days can lead to even more exaggerated losses that can leave the investor with an even bigger feeling of regret. Battling to keep emotions separated from important investing decisions can be a big plus for investors over the long haul. Of course, this idea is easier to preach and much harder to follow.

Taking a deeper look into the technical levels of MSM MALAYSIA HOLDINGS BERHAD (5202.KL), we can see that the Williams Percent Range or 14 day Williams %R currently sits at -59.26. The Williams %R oscillates in a range from 0 to -100. A reading between 0 and -20 would point to an overbought situation. A reading from -80 to

-100 would signal an oversold situation. The Williams %R was developed by Larry Williams. This is a momentum indicator that is the inverse of the Fast Stochastic Oscillator.

MSM MALAYSIA HOLDINGS BERHAD (5202.KL) currently has a 14-day Commodity Channel Index (CCI) of -251.23. Active investors may choose to use this technical indicator as a stock evaluation tool. Used as a coincident indicator, the CCI reading above +100 would reflect strong price action which may signal an uptrend. On the flip side, a reading below -100 may signal a downtrend reflecting weak price action. Using the CCI as a leading indicator, technical analysts may use a +100 reading as an overbought signal and a -100 reading as an oversold indicator, suggesting a trend reversal.

The RSI, or Relative Strength Index, is a widely used technical momentum indicator that compares price movement over time. The RSI was created by J. Welles Wilder who was striving to measure whether or not a stock was overbought or oversold. The RSI may be useful for spotting abnormal price activity and volatility. The RSI oscillates on a scale from 0 to 100. The normal reading of a stock will fall in the range of 30 to 70. A reading over 70 would indicate that the stock is overbought, and possibly overvalued. A reading under 30 may indicate that the stock is oversold, and possibly undervalued. After a recent check, MSM MALAYSIA HOLDINGS BERHAD's 14-day RSI is currently at 40.74, the 7-day stands at 38.21, and the 3-day is sitting at 40.82.

Currently, the 14-day ADX for MSM MALAYSIA HOLDINGS BERHAD (5202.KL) is sitting at 18.25. Generally speaking, an ADX value from 0-25 would indicate an absent or weak trend. A value of 25-50 would support a strong trend. A value of 50-75 would identify a very strong trend, and a value of 75-100 would lead to an extremely strong trend. ADX is used to gauge trend strength but not trend direction. Traders often add the Plus Directional Indicator (+DI) and Minus Directional Indicator (-DI) to identify the direction of a trend.
