Coming up with a viable and solid stock investment plan might be on the minds of many individual investors. A solid plan might entail defining the overall objective and recognizing tangible restraints. Figuring out these details may help the investor focus on the most important aspects of investing in the stock market. Following strategies set forth by others may work, but they may also leave the investor in a quandary. What worked in the past for one person may not work in the future for another. Investors may need to craft the plan keeping in mind the long-term goals. Although some investors and traders focus on the short-term, many investors are more interested in making the grade over a number of years, and not a number of days or months. Plans may need to be set up so that they are flexible and have the ability to withstand unforeseen shifts and rapidly changing stock market scenarios. Flexibility may end up being the key to a successful plan down the road. Investors may also want to do regular check-ins on portfolio performance in order to keep tabs on how well the plan is working.

Taking a deeper look into the technical levels of MSM MALAYSIA HOLDINGS BERHAD (5202.KL), we can see that the Williams Percent Range or 14 day Williams %R currently sits at -92.00. The Williams %R oscillates in a range from 0 to -100. A reading between 0 and -20 would point to an overbought situation. A reading from -80 to -100 would signal an oversold situation. The Williams %R was developed by Larry Williams. This is a momentum indicator that is the inverse of the Fast Stochastic Oscillator.

MSM MALAYSIA HOLDINGS BERHAD (5202.KL) currently has a 14-day Commodity Channel Index (CCI) of -33.49. Active investors may choose to use this technical indicator as a stock evaluation tool. Used as a coincident indicator, the CCI reading above +100 would reflect strong price action which may signal an uptrend. On the flip side, a reading below -100 may signal a downtrend reflecting weak price action. Using the CCI as a leading indicator, technical analysts may use a +100 reading as an overbought signal and a -100 reading as an oversold indicator, suggesting a trend reversal.

The RSI, or Relative Strength Index, is a widely used technical momentum indicator that compares price movement over time. The RSI was created by J. Welles Wilder who was striving to measure whether or not a stock was overbought or oversold. The RSI may be useful for spotting abnormal price activity and volatility. The RSI oscillates on a scale from 0 to 100. The normal reading of a stock will fall in the range of 30 to 70. A reading over 70 would indicate that the stock is overbought, and possibly overvalued. A reading under 30 may indicate that the stock is oversold, and possibly undervalued. After a recent check, MSM MALAYSIA HOLDINGS BERHAD's 14-day RSI is currently at 42.59, the 7-day stands at 42.96, and the 3-day is sitting at 42.56.

Currently, the 14-day ADX for MSM MALAYSIA HOLDINGS BERHAD (5202.KL) is sitting at 24.08. Generally speaking, an ADX value from 0-25 would indicate an absent or weak trend. A value of 25-50 would support a strong trend. A value of 50-75 would identify a very strong trend, and a value of 75-100 would lead to an extremely strong trend. ADX is used to gauge trend strength but not trend direction. Traders often add the Plus Directional Indicator (+DI) and Minus Directional Indicator (-DI) to identify the direction of a trend.
